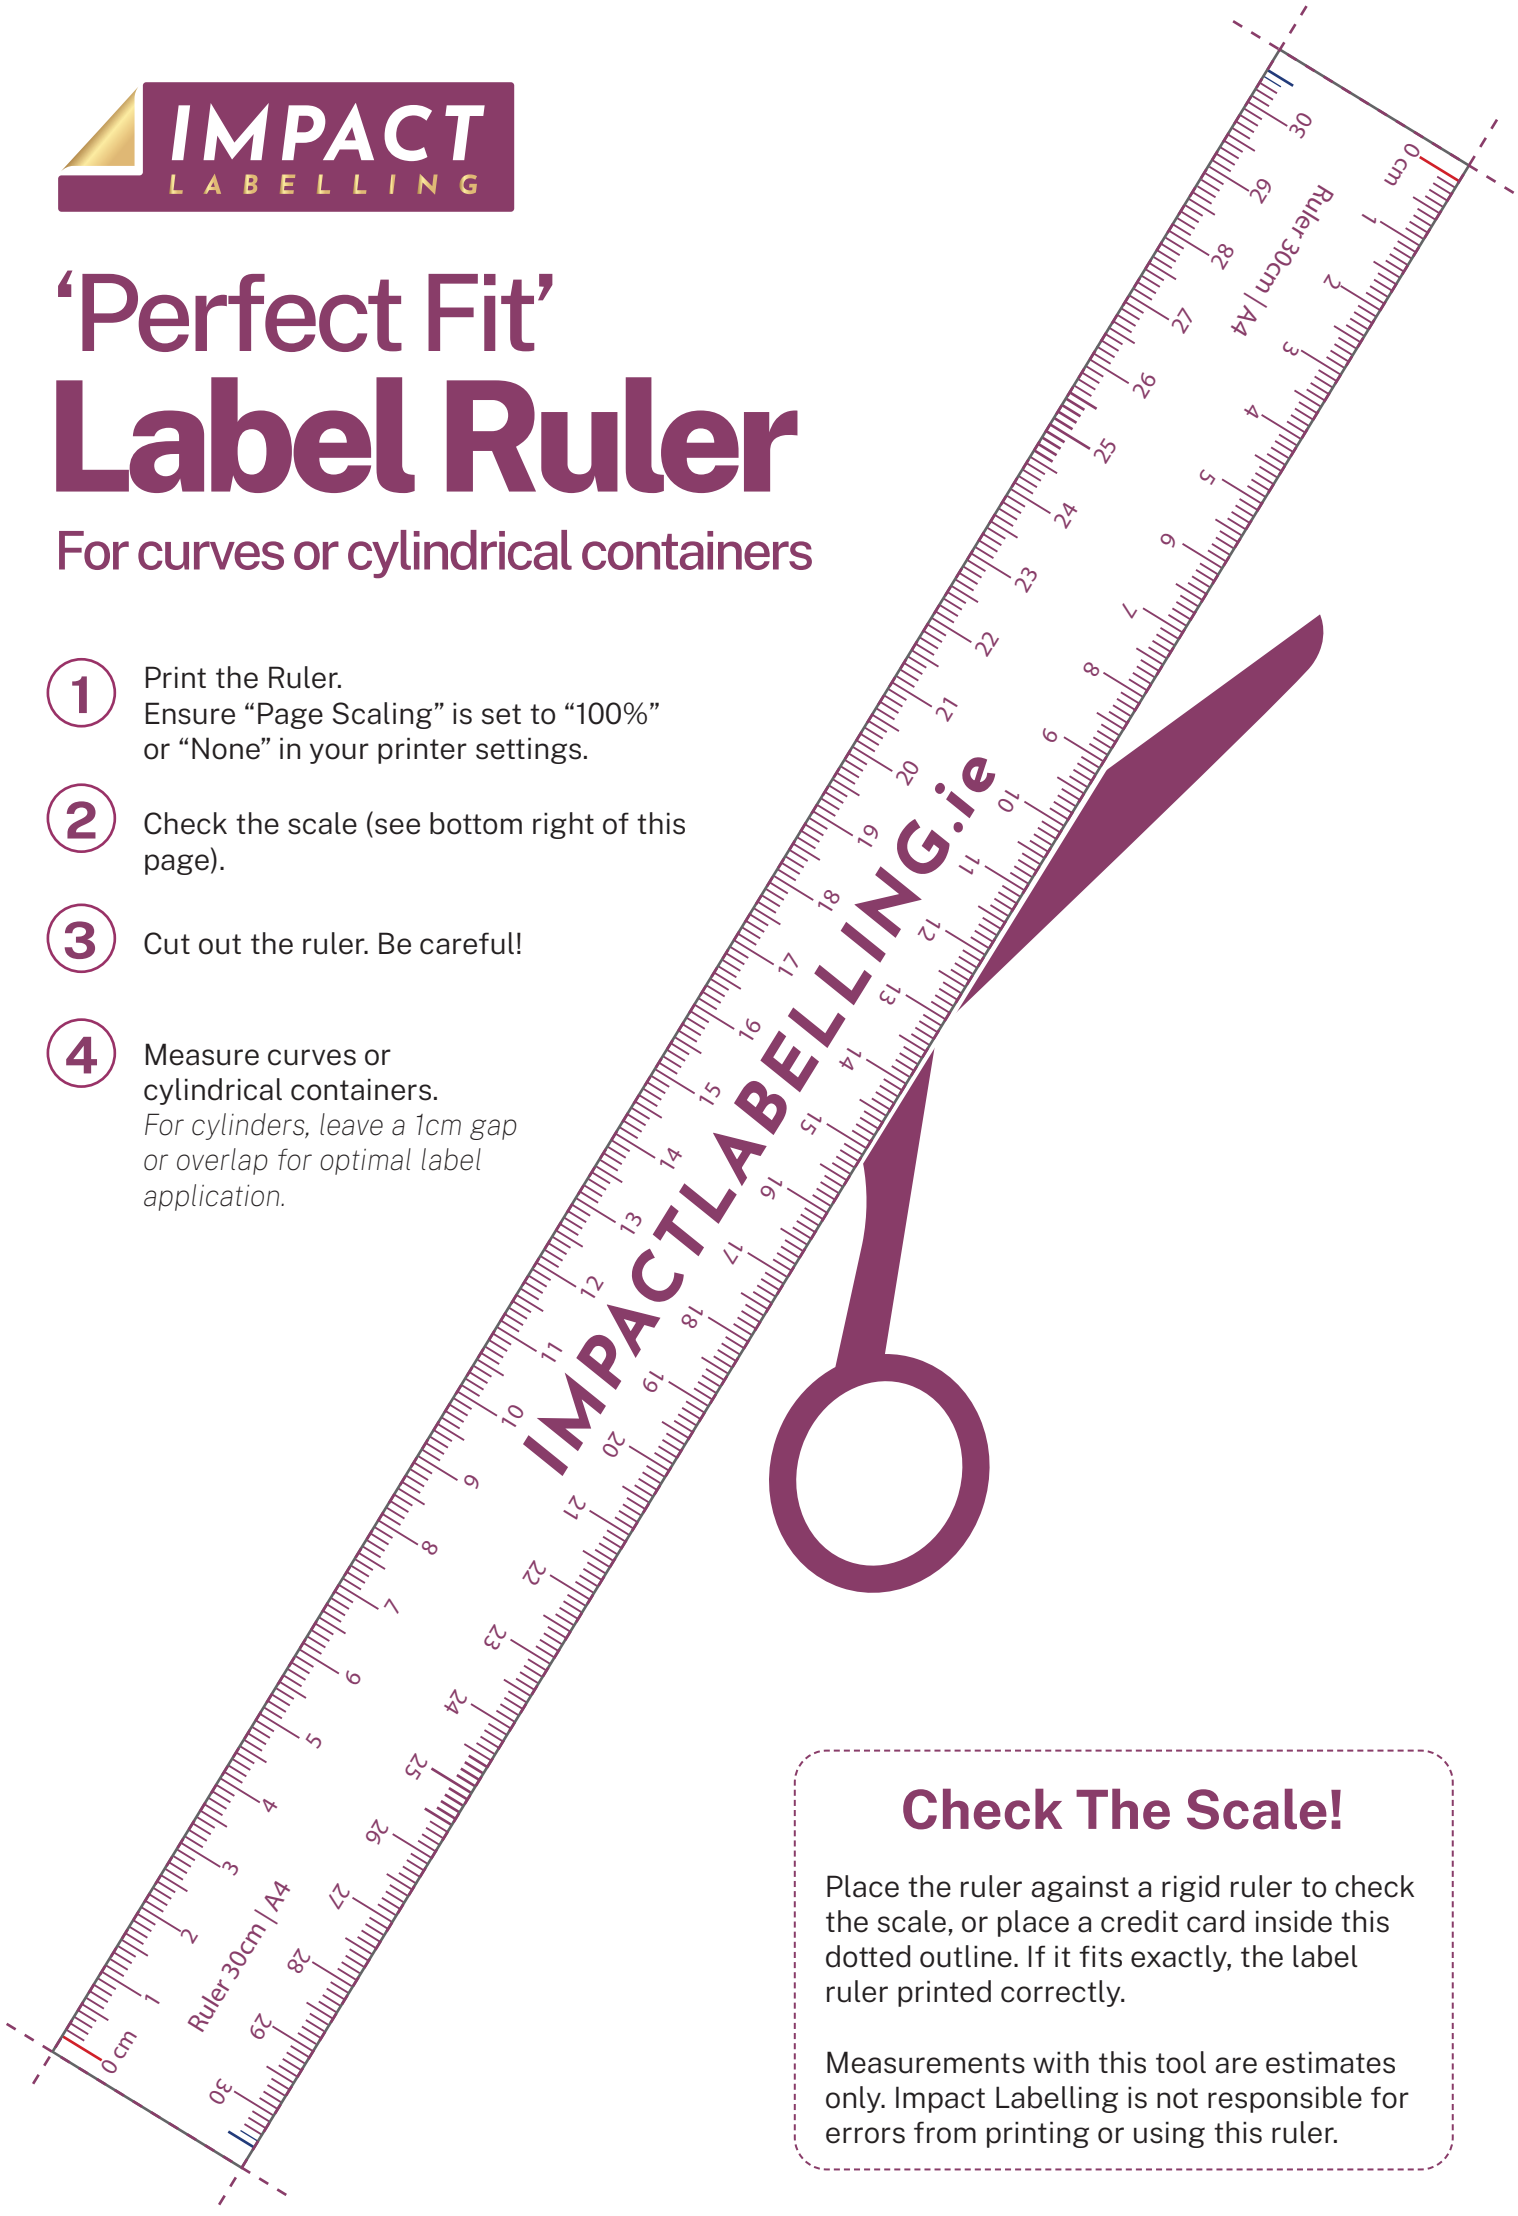
IMPACT LABELLING

‘Perfect Fit’ Label Ruler

For curves or cylindrical containers

1. Print the Ruler.
   Ensure “Page Scaling” is set to “100%” or “None” in your printer settings.
2. Check the scale (see bottom right of this page).
3. Cut out the ruler. Be careful!
4. Measure curves or cylindrical containers.
   For cylinders, leave a 1cm gap or overlap for optimal label application.



Check The Scale!

Place the ruler against a rigid ruler to check the scale, or place a credit card inside this dotted outline. If it fits exactly, the label ruler printed correctly.

Measurements with this tool are estimates only. Impact Labelling is not responsible for errors from printing or using this ruler.
